Director of Laboratories

A handwritten signature in blue ink that reads "John G. Newby".

Subject: Revision of reference range for Free Thyroxine (FT4)

Hagerstown Medical Laboratory will revise the reference range for Free Thyroxine (FT4) for adult patients on June 9, 2010. Data review indicates that a range of 0.7 to 1.8 ng/mL is a more correct reference range for our population. This range should give a better correlation with TSH as well as give fewer false positive and false negative results.

If you have further questions or need further information, please contact me by calling 301-665-4900 or 1-800-428-2105.
